#### **DETAILED ACTION**

This is the second office action for U.S. Application 10/680,448 for Interlocking Fasteners for Mounting Wall-Hung Articles filed by Michael Grant on October 7, 2003.

### Drawings

The drawings were received on January 19, 2005. These drawings are acceptable.

#### Claim Rejections - 35 USC § 103

Claims 1-3 and 6-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeLuccia in view of U.S. Patent 5,961,090 to Parkin. DeLuccia discloses an elongate clip (see fig. 2) with a planar first side (32) and a planar second side (20) which is parallel to the first side and is separated therefrom to provide a predetermined clip width. There is a contact surface (portion including the topmost surface of the clip, containing the portion extending down to the stepped portion between 32 and 16) that extends between the first side and second sides along an elongate edge of the clip. The contact surface has a Z-shape in cross section, and includes a first face (the topmost surface of the clip) which angles inwardly and forwardly from the first side at a predetermined angle (90 degrees with respect to the first and second sides), and a second face (portion extending inward from 20, towards 32) that angles inwardly and rearwardly from the second side at a second predetermined angle (90 degrees with respect to the first and second degrees with

Application/Control Number: 10/680,448

Art Unit: 3632

32) that is longer than the first and second faces, and the third face is at a third predetermined angle (0 degrees) with respect to the first and second sides, which is less than the first and second angles. A portion of the first side is recessed towards the second side (the portion containing 22) and there is at least one opening (that receives fastener 26) which extends from the recess to the second side.

DeLuccia does not disclose the first face or the second face extending at acute angles. Parkin discloses elongate clips for hanging articles from a vertical wall. Each clip is provided with a contact surface (20 and 30) that extends from planar first and second sides (18 and 28), respectively. The faces of the contact surfaces extend from the planar surfaces at acute angles to provide a secure supporting arrangement between the clips. It would have been obvious to one of ordinary skill in the art at the time of the present invention to have formed the faces of the contact surface of DeLuccia with acute angles, as taught by Parkin, for the purpose of providing a secure supporting arrangement between the clips. DeLuccia does not disclose the specific angles of the first, second, or third angles. However, the specific angle is a matter of design preference that would have been obvious to one of ordinary skill in the art at the time of the present invention for the purpose of modifying the shape of the clip for different structures.

Claims 4, 5, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeLuccia in view of Parkin, and in further view of Brindisi. DeLuccia in view of Parkin does not disclose distal extremities with rounded ends offset from the first and second faces. Brindisi provides a teaching for providing a rounded distal end (827 of

Application/Control Number: 10/680,448

Art Unit: 3632

fig. 47) offset from the face of a hooking portion on a wall. It would have been obvious to one of ordinary skill in the art at the time of the present invention to have provided the faces taught by DeLuccia in view of Parkin with rounded, offset distal extremities, as taught by Brindisi, for securely fitting two objects together. DeLuccia in view Parkin, and in further view of Brindisi does not disclose the specific distance between the offset and each face, but that is a matter of design preference that would have been obvious to one of ordinary skill in the art at the time of the present invention.

## Response to Arguments

Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Marsh whose telephone number is (703) 305-0098. The examiner can normally be reached on Monday-Friday from 8:00AM to 4:30 PM. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone
